

Sales Performance: Business Recommendations

Prepared for Alfido Tech · Based on Superstore Sales Performance Analysis (SQL · Python · Power BI)

Context

The underlying analysis covers \$2.26M in total sales across 5,000 orders, 793 customers, and roughly 2,000 products, with an average order value of \$459.48 and average shipping time of 3.96 days. Sales grew steadily from \$480K in 2015 to \$723K in 2018. This report translates those findings into specific actions Alfido Tech can take to grow revenue, improve regional balance, and strengthen customer experience.

Dashboard Snapshot

Power BI Sales Performance Dashboard — KPIs, regional, category, seasonal & time trends

Key Findings

- West (\$709K) and East (\$668K) regions outperform Central (\$496K) and South (\$389K) — a nearly 2x gap between the strongest and weakest region.
- Technology is the leading category at 36.6% of sales, ahead of Office Supplies (32.2%) and Furniture (31.2%).
- Autumn is the strongest season, and year-over-year sales have grown consistently from 2015 to 2018.
- The Consumer segment drives 50.8% of total revenue — the single largest growth lever.
- Average shipping time is 3.96 days, a measurable lever for customer satisfaction.

Recommendations for Alfido Tech

Priority	Recommendation	Expected Business Impact
High	Reallocate marketing and inventory budget toward the West and East regions, which together generate 61% of revenue (\$709K and \$668K).	Improves ROI on regional spend and reduces stockouts in the highest-demand markets.
High	Launch a turnaround plan for the South region (\$389K, the lowest performer) — localized promotions, expanded product assortment, and a review of fulfillment coverage.	Closes the regional gap and unlocks incremental revenue from an underperforming market.
Medium	Double down on Technology as the flagship category (36.6% of sales) with bundling, cross-sell, and premium SKUs, while auditing low-turn Furniture lines.	Grows average order value and improves category-level margin.

Priority	Recommendation	Expected Business Impact
Medium	Shift promotional and staffing intensity toward Autumn, the peak season, and design off-season offers to smooth demand the rest of the year.	Maximizes revenue capture in peak periods and reduces idle capacity in slow months.
Medium	Build a loyalty and retention program for the Consumer segment (50.8% of revenue) — this segment is the primary growth lever.	Increases repeat purchase rate and customer lifetime value.
Low	Target shipping time reduction below the current 3.96-day average through carrier renegotiation or regional warehousing.	Strengthens customer satisfaction and competitiveness on delivery speed.

Regional & Category Deep Dive

Regional imbalance

The gap between West (\$709K) and South (\$389K) is the single largest structural issue in the data — the strongest region outsells the weakest by nearly 2x. Left unaddressed, this concentrates risk: a disruption in West or East would have an outsized effect on total revenue. Alfido Tech should treat regional balance as a portfolio-diversification question, not just a sales-target question.

Category mix

Technology, Office Supplies, and Furniture are close in overall share (36.6% / 32.2% / 31.2%), but Technology's lead suggests it is the more resilient, higher-velocity category. Furniture's comparatively lower share is worth investigating further — whether it reflects lower demand, longer sales cycles, or margin pressure will determine if the right move is to invest, reposition, or trim the line.

Risks & Assumptions

- Figures reflect historical Superstore-style data (2015–2018); Alfido Tech should validate these patterns against current internal sales data before committing budget.
- Regional and category recommendations assume comparable market conditions across regions; local competitive or economic factors may change the calculus.
- Shipping-time improvements depend on carrier and warehousing costs, which are not captured in this dataset and should be modeled separately before committing to a target.

Suggested Next Steps

- 30 days: Stand up a South-region promotional pilot and a Technology cross-sell bundle; both are low-cost, high-signal tests.
- 90 days: Review shipping/logistics partners for the two slowest regions and build an Autumn seasonal campaign calendar for next cycle.
- Ongoing: Track regional, category, and segment KPIs monthly via the Power BI dashboard to monitor the impact of these changes.
